

Consultation submission drafting decision record

7 October 2026 Version 0.1

Dan authorised continuation after reviewing the controlled change map. This record distinguishes drafting approval from final policy selection and lodgement approval. The v0.4 Review 1 document evolves the genuine v0.3 and retains the carpentry career pathway, contrary evidence and professional boundaries.

Authority recorded

CM-01 to CM-28: accepted as the scope for controlled drafting, based on Dan's overall statement that he agrees and gives the go-ahead to continue. His spoken enumeration was not treated as a separate approval count. This authorises a review draft, not changes to governed confidence values or selection of an RRC statutory model.

Follow-up email: prepare copyable text for Dan to send manually from his other email. No email has been sent. Dan's impression that the department is still unsure which avenue to choose is retained as a practitioner recollection, not attributed as an official statement by an identified woman.

Disposition of policy decisions

D01 Residential scope

Compare in the draft; final scope selection remains open. v0.3's general class is retained for testing, with residential carpentry and existing homes as the initiative's detailed focus. No whole-scheme residential-only limitation was inferred from blanket drafting approval. Affected text: Q5 and class comparison.

D02 Apprenticeship and equivalence

Retain apprenticeship plus Certificate III as Dan's preferred future foundation, while separately addressing verified existing-worker transition. Final future non-apprenticeship eligibility remains for review. No automatic grandfathering or tenure-only recognition. Affected text: Q7 and assessment architecture.

D03 Employee and subcontractor status

Compare common technical outcomes within proposed tiers against common work-based registration. Final statutory tier choice is not selected. Accurately attribute slide 3 permissions and retain the unresolved below-\$10,000 question. Affected text: Q6.

D04 Transition and retirement

Draft the agreed staged, modelled approach and practical support for older workers. Do not select five years or automatic age waivers. Affected text: Q7 and Q9–Q13.

D05 Assessment compatibility

Draft separate baseline verification and advanced research methods. Current primary BPC guidance checked on 7 October: risk-proportionate documentation and shift from interviews to exams, starting DB-U. Future carpenter specification not verified. Affected text: primary recommendations, Q9, Q12 and assessment architecture.

D06 Conditional support

Draft the approved refinement: staging does not by itself justify restriction. Compare existing and less burdensome controls; narrow, revise or do not introduce restrictions where incremental benefit is not established. Affected text: opening, Q3, safeguards and conclusion.

Source reconciliation and contrary evidence

- The early meeting survey support signal and later email's report of support and opposition concern different populations and times. Neither establishes consensus or a majority.
- Recruitment, retention, defect and quality improvements remain expected benefits. Causal effect and actor attribution are not established by practitioner cases or the consultation process.
- The partial transcript ends during employee authorisation. The deck supplies its own table, not recovered transcript wording. Under-\$10,000 contracting, permits, insurance, corporate roles and commencement require authoritative clarification.
- Five-year provisional status, a general licence and advanced credentials are participant discussion positions. No government endorsement of RRC or the EB framework is claimed.
- The deck's over-20,000 workforce estimate is attributed to DTP. No renovation cohort count is inferred. The \$16 million program is not an allocation to our instruments or proposed subsidies.
- Qualification audit is not re-performed. "Not clearly mandatory" is not converted to "not taught". Existing building cases identify hypotheses rather than a statewide gap.
- Participant recruitment, selection bias, contrary and null cases, current builder pathways and possible non-statutory solutions remain material counter-tests. No canonical evidence finding or confidence percentage is changed.

Baseline and repository checkpoint

Repository: dantuffy3-cmyk/carpenters-for-housing-reform. Controlled branch: copilot/controlled-consultation-submission-v04.

Approved base: 5ffbc77b172938f3a4fda316d552a34b2ceb04c4. Remote head verified 7 October: 8309d5006bd260ebbd888e3e4c2c4c9f26298621. Approved base is an ancestor; additions are the original DOCX, PDF and transfer bundle. No experimental branch used.

AGENTS.md rechecked on controlled branch. PROJECT_POSITION.md and DECISION_REGISTER.md absent at the verified head. No repository files or canonical decisions edited by this drafting work.

Original DOCX SHA256:

Changes and review gates

The change map remains the 28-section traceability index. Review 1 applies the approved evidence, burden, transition and framing refinements. Original question headings 1–13, historical RIS table and numerical qualifications remain. New source references [5]–[8] identify the meeting record, deck, email and BPC guidance. Table changes preserve proposed-versus-existing authority distinctions and the optional nature of advanced progression.

Affected deliverables are the separate v0.4 Review 1 DOCX and readable PDF, this decision record, and the unsent follow-up email. Original v0.3 documents, repository rules, meeting record, governed findings and website content remain unchanged.

Next gate: Dan reviews the draft, particularly Q5 scope, Q6 tiers and Q7 future-entry eligibility. Legal, policy, economic and practitioner reviews remain outstanding; complete legal assertions only after authoritative clarification. No branch push, PR, merge, publication, submission or outreach was performed.
